

INNOVATIVE, PROFESSIONAL, COMPLETE INTEGRATION SERVICES

The Challenge of Video

Video provides the most powerful, life-like communication experience because it produces the effect of actually being there. The meaning is conveyed, the topic is understood and more gets done.

Dramatic progress in networking and video technology has driven the development of scores of video-enabled devices. Video communications has grown from a dedicated conference room application to a pervasive component of every desktop, tablet, and smart phone. All of these applications can now be fully integrated – unified – with core IT applications for telephony, e-mail and presence. Users now expect to use any device to communicate, with anyone, in any organization, anywhere in the world.

This presents a major concern to corporate and government IT groups who have the task of meeting users' expectations while managing costs and adhering to policies for service levels and security.

Video poses two challenges: first, it requires network configuration and bandwidth to provide a quality experience and the right infrastructure to connect to other endpoints.

Second, it requires management and governance to control its resource consumption and to maintain its integrity as an IT application.

An IT-centric approach for installing, integrating, and deploying video is required to enable its full potential to be realized.

Yorktel Integration Services

Yorktel has developed industry-leading expertise managing some of the world's largest business and government agency video networks. In the course of designing and building tens of thousands of video solutions, the company has developed hands-on knowledge of the true capabilities of technology and products.

Yorktel selects, integrates and deploys IT-ready video systems using best-in-class technology from leading vendors that are ideally suited to meet your requirements now, and as they grow.

Complete Video Conferencing Solutions

Yorktel's Video Conferencing Solutions Service is ideal for clients who require a complete upgrade of existing video capabilities to a fully

enabled video conferencing and unified communications environment, which supports applications including:

- Fully immersive Telepresence
- High-definition video conference rooms
- Unified Communications platform integration
- Mobile video applications
- Cloud and On-Premise infrastructure deployment
- Advanced collaboration tools including smart-boards, tablets, projection environments
- Integration with video infrastructure and Yorktel hosted video infrastructure
- Video network evaluation and upgrade

Standardized and Custom Offerings

Yorktel offers standardized fixed and mobile video solutions with best-in-class functionality, and rapid delivery, installation and deployment.

Our Custom Solutions enable us to tailor the video solution to your exact needs – matching the usage requirements for rooms, users and applications of all types.

Unified Communications Integration Services

As many organizations today are seeking to enable integrated communications, they require the seamless integration of video conferencing systems and applications into the broader Unified Communications (UC) environment.

Yorktel UC Integration Services provide the expertise to enable enterprise wide Unified Communications:

- Network assessment to identify various communications devices for integration, desired user interaction and system management
- Network models to verify feasibility of integration and integrity of deployment
- Integration and registration of video conferencing systems in enterprise UC directories
- Functionality testing to ensure video is optimized in the environment
- Integration of legacy and currently installed video conferencing equipment

Yorktel

With over 25 years of experience managing some of the world's largest video networks, Yorktel has the experience to make your video network work.

Yorktel serves customers on a global basis to provide consistently high quality, reliability and uninterrupted availability for video communications. Contact us today to make video work – for you.
